ENGINEERING CAPSTONE PROGRAM

PUT OUR STUDENTS TO WORK FOR YOU

Does your organization need help solving a problem or improving an existing solution? Our talented students want to help you. The College of Engineering is now accepting proposals from industry partners for our Engineering Capstone Program.

Our senior-level students will work in teams on real-world projects brought forth by company representatives. At the end of the term, student teams will present their work to the company representatives and department faculty, and will receive a grade from the capstone professor based in part on their work on the project.

Depending on the scope and discipline, projects may require one to two semesters to complete. Sponsorship will range from $3,000 to $5,000.

The college has a long history of partnering with industry to solve problems. We rank in the top 30 percent of all engineering programs in the nation in research expenditures, according to the NSF. This new capstone initiative will extend these research opportunities to our undergraduate students and give them valuable hands-on experience working with industry professionals.

“By the time our students reach the capstone course, they are eager to apply the concepts that they learned in the classroom to a real, tangible project. This capstone program is mutually beneficial to students as well as our industry partners.”

– Farshad Fotouhi
Dean, College of Engineering

COLLEGE OF ENGINEERING RESEARCH STRENGTHS

- Automotive Safety
- Big Data and Business Analytics
- Biomedical Engineering
- Green Technologies
- Injury Biomechanics and Healthcare Engineering
- Manufacturing
- Transportation
- Urban Watershed
- And Much More...
